PRODUCT DESCRIPTION

LOCTITE ABLESTIK ABP 8303A provides the following product characteristics:

Technology	BMI Hybrid
Appearance	Silver paste
Cure	Heat cure
Application	Component assembly, Conductive die attach paste
Product Benefits	- One component - Low outgassing - Minimal RBO - High die shear strength - Low stress - Ideal for large die sizes - High reliability
Typical Package Application(s)	QFP, QFN and other metal leadframe packaging
Key Substrates	Cu, Ag or PPF

LOCTITE ABLESTIK ABP 8303A silver filled, conductive die attach adhesive is recommended for use in bonding integrated circuits and components to metal substrates. Its moderate modulus, high adhesion and low stress enable robust bonding of medium/large sized dice on a wide variety of metal surfaces, including Cu, Ag and PPF.

This product is particularly suitable for packages in which tight control of resin bleed out is required. The material is hydrophobic and stable at high temperatures.

GENERAL INFORMATION

For safe handling information on this product, consult the Safety Data Sheet, (SDS).

THAWING:

1. Allow container to reach room temperature before use.
2. After removing from the freezer, set the syringes to stand vertically while thawing.
3. Refer to the Syringe Thaw time chart for the thaw time recommendation.
4. DO NOT open the container before contents reach 25°C temperature. Any moisture that collects on the thawed container should be removed prior to opening the container.
5. DO NOT re-freeze. Once thawed to -40°C, the adhesive should not be re-frozen.

**DIRECTIONS FOR USE**

1. Thawed material should immediately be placed on dispense equipment for use.
2. If the adhesive is transferred to a final dispensing reservoir, care must be exercised to avoid entrapment of contaminants and/or air into the adhesive.
3. Adhesive must be completely used within the product's recommended work life.
4. Silver-resin separation may occur if the adhesive is left out at room temperature, beyond the recommended work life.
5. Apply enough adhesive to achieve a 50 µm wet bondline thickness, dispensed with approximately 25 to 50 % filleting on all sides of the die.
6. Alternate dispense amounts may be used depending on the application requirements.
7. Star or crossed shaped dispense patterns will yield fewer bondline voids than the matrix style of dispense pattern.
